Lab 2: VSCode TypeScript Tutorial

Instructions

In this assignment, we will create and execute a simple TypeScript application using Visual Studio Code.

Implement the *Hello World* application using the instructions provided in the

[TypeScript Tutorial With Visual Studio Code](#) .

If you use the [Horizon system](#), all required software is pre-installed and configured. If you want to install the software on your computer, you should install Visual Studio Code first, then

There is no Canvas submission for this project, you will submit your work to a GitHub repository as described below.

Submitting your work

Since there are multiple screen snips, please insert them into a PowerPoint Presentation with three slides showing the following screenshots of your work:

- A snip of the command and output showing the version of TypeScript installed.
- A snip of the code and console output for the 'Hello World' application.
- A snip of the code and console output after modifying the code to display 'Hello' and your first and last name.

There is no Canvas submission for this project, you will commit the PowerPoint presentation with screen snips to the provided classroom repository.
